W⁺

whitening solution by mesoestetic®

Solar radiation, skin aging and genetics are among the main factors influencing the tone and intensity of skin pigmentation, and can lead to unsightly effects because of excessive melanin accumulation. In addition, skin tone becomes uneven over time and localised dark spots appear.

ultimate W⁺ is a cosmeceutical line enriched with [meso]white complex®, a unique complex based on active substances with a threefold action:

Whitening and lightening: it inhibits the enzymes involved in the melanin synthesis processes, while at the same time stimulating cell renewal, removing melanin accumulations. It makes skin tone uniform and lightens it, attenuating the appearance of dark spots.

Antiaging and moisturising: enhances the natural skin barrier. It minimises the pore size and reduces wrinkles and fine lines.

Preventive and protective: powerful antioxidant action. It protects from UV rays and pollution.

ultimate W+ whitening cream //

Whitening cream formulated to smooth out skin tone reducing spot coloration while preventing the appearance of wrinkles and expression lines. The combination of [meso]white complex® with garden cress regulates melanogenesis, limiting melanin formation. Skin tone is more uniform, skin is visibly clearer and glowing.

ultimate W+ whitening spot eraser //

Ultra-concentrated whitening treatment indicated for local action over hyperpigmentation of the face, neck, neckline, and hands. The [meso]white complex® attenuates the intensity and size of dark spots and it causes a keratolytic action that enables stimulating cell renewal, smoothing out the skin tone and preventing the appearance of new excess pigmentation. Its format with applicator enables a precise product distribution.

ultimate W+ whitening essence //

Intensive serum with whitening and antioxidant action. It prevents and significantly attenuates the appearance of dark spots and small wrinkles, unifying the skin tone. The [meso]white complex® combined with garden cress inhibits tyrosinase and limits melanin transfer to the upper skin layers, enhancing correction of pigmentation irregularities. Its ultra-light texture leaves the skin dull, the spots fade away, the complexion progressively recovers homogeneity and optimum luminosity.

ultimate W+ BB cream // SPF50 – PA+++

Multi-action cream which combines the moisturising power and high protection of a treatment product with the perfecting properties of a makeup base, unifying and illuminating the skin tone instantly and naturally. It ensures maximum, constant photoprotection against UVA and UVB rays. It attenuates spots and imperfections in addition to preventing and responding to the appearance of wrinkles and expression lines.

ultimate W+ whitening foam //

Cleanses and purifies the skin in depth, effectively removing the remains of makeup and eliminating dead cells and impurities. It contains glycolic acid and lactic acid which have a mild keratolytic, renovating and seboreregulating action. Its creamy texture becomes a soft, rich foam which is easy to rinse off, leaving the skin moisturised, fresh and luminous.

ultimate W+ whitening toning lotion //

Toning clarifying lotion, mattifying and regulating, that completes make-up removal and optimises the efficacy of the treatments applied subsequently. Frees the skin of impurities and leaves it perfectly clean and matt. Stimulates natural regeneration and unifies the skin tone. Its gel texture provides a sensation of comfort and immediate freshness. Does not contain alcohol.
